TECHNICAL SKILLS

Backend:
PHP (Laravel), Python, C# (.NET).
Frontend:
JavaScript, React, HTML, CSS.
Database:
MySQL, DBMS.
Legacy Systems: COBOL, AI-driven Refactoring.
Tools:
REST API, Git, GitHub.

EDUCATION

COBOL & AI Legacy Modernization | AITHO
AI-supported legacy system refactoring.
Full Stack Web Development | Aulab
PHP, Laravel, JavaScript, Java
Mechanical Engineering Studies | Cagliari
Background in industrial engineering, with skills in technical analysis and a strong understanding of complex systems and processes.

CERTIFICATIONS

Microsoft Azure Fundamentals - 2022
IBM Z Xplore (Concepts & Advanced) - 2026

Note: automunita

Junior Backend Developer with solid experience in building application logic using PHP (Laravel) and Python. Specialized in relational database management, external API integration, and decoupled software architectures. Academic background in Mechanical Engineering, providing a structured and analytical approach to solving complex problems, along with a strong commitment to continuous learning.

WORK EXPERIENCE

WEB DEVELOPER - FACILEDDOC

April 2025 - July 2025

- Developed backend logic in PHP (Laravel) for complex application workflows and data streams.
- Optimized MySQL databases and managed complex entity relationships.
- Advanced debugging through log analysis and critical error resolution.

BACKEND DEVELOPER INTERN - AVANADE

February 2022 - November 2022

- Developed backend components within a C# (.NET) environment.
- Managed version control via Git and collaborated within Agile teams.

FEATURED PROJECTS

SmartSite - Multi-Tenant Document Management System

- Developed a DMS with data isolation using tenant_id logic.
- Implemented validated PDF upload systems and document state management (pending/accepted).
- Automated database relationships using Eloquent Traits and security Middleware.

MotoGP API + MotoGP Hub

- Decoupled Architecture: Python (Vercel) backend for RESTful API exposure.
- Interactive React frontend for real-time consultation of standings, riders, and calendars.

OpenF1 Project

- Interactive web app built with Python and Streamlit.
- Processed real-time telemetry (OpenF1 API) and historical data (Ergast API) using Pandas.
- Integrated Google Gemini AI as a conversational strategic assistant for live data analysis.

LANGUAGES

Italian - Native
English - Strong technical proficiency
